

Writing a document

Based on: How to Write a Paper by Mike Ashby

Engineering Department, University of Cambridge, Cambridge
6rd Edition, April 2005

<http://www-mech.eng.cam.ac.uk/mmd/ashby-paper-V6.pdf>

The ~~nine circles~~ five steps of writing

- How to write a document?

Know your audience

- Are you writing a thesis?
 - Your audience will be (mostly) the experts.
(only the jury will read it! :D, jk?)
 - A lot of details are expected.
- Is it a scientific paper?
 - Will be reviewed by experts in your field.
 - Very knowledgeable. Need strong arguments!
 - Skeptical!
- Is it a Project proposal?
 - Audience (stakeholders, clients) may not be expert in CS.
 - They will have different priorities (\$, relevance).
 - Does it look like you know what you are doing?

How to start?

- Know what you want to say!
 - You don't know what to write! Do you know what you want to say?
- What's the point?
 - Research paper: look at how I solved this hard/cool problem.
 - Project proposal: This is my plan to solve this problem.
 - Essay: This is what I think about this issue. Here is proof.
 - Thesis: This is my thesis. Let me convince you.
- What do I need to do this?
 - Figures, diagrams, references?

Ignore the formatting

- Put down some bullets, e.g.:

Introduction:

- It's difficult to write a document, so can I improve student's experience?
- Explain how to start writing a document:
 - Start by putting down some bullets
 - Make a snarky comment that it's the same with presentations!
 - Make a joke about how this is the opposite of advice in the presentation about presentations!
 - Think about what you want to say
 - Don't try to write the perfect document first try – iterate versions.

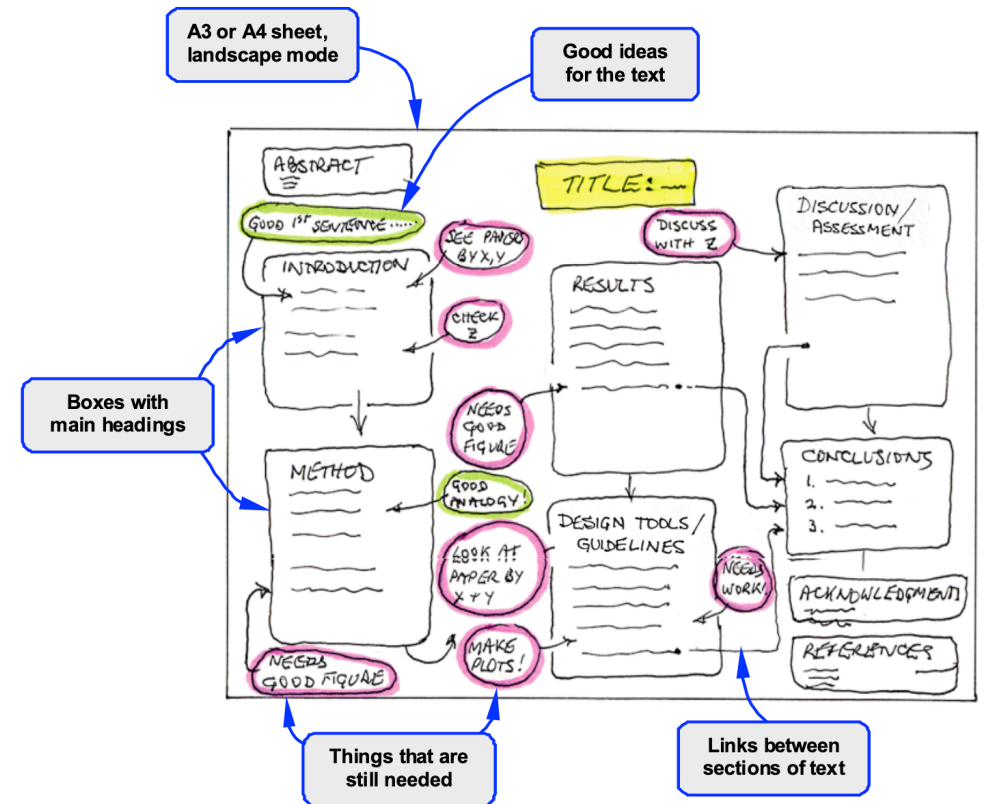

Format:

- You need to format your document
- Introduction, conclusion, abstract, the title
 - Explain the function of each of them.

...

Concept-sheets

- More visual
 - Set up post-its, make a drawing, use a board
- Check the document I based this presentation on
 - Figure 3, page 6
 - The model for a concept sheet

Develop your bullets into a first draft

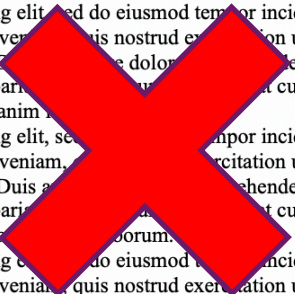

- Start converting those bullets into text
- Don't worry too much about readability at first
 - You may get stuck rewriting a paragraph for hours
 - And end up removing it in the end 😞
- Improve the draft in multiple iterations
 - Get feedback: group members, mentors, friends, etc.

Forget about it

- If you stare at something for too long, you'll miss the details
- Ignore your document for a period (1-2 days)
 - Give it to a collaborator?
 - Do it early so that you have the time
- Then read it!
 - So many wrong things with it!!!!
 - How did I miss this?
 - Read out loud!

Organization

Have one!

The high level

- The title page
 - This is your lure!
- Abstract (if longer than 1-2 pages) [Executive summary in projects!]
 - The reader bit, reel the reader in!!!
- Introduction
 - Convince the reader of the value of your work
- Body
 - The detail, for those who really want them!
- Conclusion
 - The thing everyone will remember

How I see my paper

How they see my paper

A Clockless Synchronisation Framework for Cooperating Mobile Robots

Abstract—Cooperating mobile robots are real-time systems that require a global TDMA protocol that allows for real-time and guaranteed delivery of messages within deadlines, given its predictable

VII. CONCLUSIONS

network with time-critical nodes.

Using a consensus algorithm with a phase representation of the TDMA slots, we propose a distributed algorithm for operating as a group in the network. It handles variable delays and allows the nodes to adapt to changes in the TDMA frame width. In the future, we plan to study the effects of the proposed algorithm on

Nice title

Abstract... Hmm good

Conclusions... nice!

Cool pictures, they are great

Did you cite me???

The title

- This is how you lure the reader
 - It's the first thing anyone will read
- Title should match the contents
 - Document ignored
- But it should sound interesting and appealing

Rate Monotonic vs. EDF: Judgment Day

GIORGIO C. BUTTAZZO
University of Pavia, Italy

The abstract

- Three words: Short, meaningful, insightful
- The reader bit the lure!
 - Reel it in!
- Don't make it too long!
 - Go to the point
 - Set expectations for content
 - Leave details for the document

Introduction

- Explain what you will be talking about
 - Is this a project proposal, report, essay, opinion article?
- Set the context to the reader
 - **Where** does this work fit in the grand scheme?
 - **Why** is the problem important/interesting?
 - **How** do you propose to solve it?
 - Answer the question: “So what?”

Introduction

Capture the reader's attention, start strong!

It is widely accepted that
my subject is of great
importance... zzzzzzzzzzzz
😴 ... but in fact there are
issues that... zzzzzzzzzzzz
😴

“Scientific reproducibility is a problem
that likely will require a few hops of
progress before we land on a complete
solution.”
- wilkie

The body

- This will greatly depend on what you are writing
 - No formula 😞
- What do you want to tell the reader?
 - You did something and have some results (paper)
 - You are planning something (project proposal)
 - You have a thesis (well... a thesis)

Writing a project proposal?

- Objectives
 - This project will... to... Because
- Approach
 - We'll solve it by creating an app that does this... to solve that...
 - I need to learn how to do ...
 - I'll use the programming language/framework because...
- How? By when?
 - I plan to have this stage complete by... and that stage by...
 - This stage may take longer than predicted because...
- Product
 - The expected outcome is... that is capable of... fulfilling all the objectives

Writing a report?

- Objectives
 - This project objectives were...
- Approach
 - I solved the problem by... using this technique...
 - Communication with client was done like so...
- Completion
 - Fulfilled initially set objectives 1 through 5.
 - Did not complete objectives 6 through 7 due to a change of requirements
 - Didn't have enough time to complete objective 8.
- Issues and reflections
 - Using tool X was a good decision because...
 - Using tool Y was a bad decision because...
 - Communicated with client/developers this way... It did(n't) work because...

It's your work but you're not alone

- Refer back to what you want to say!
- Check if there is a guide
 - In my website is the guide is very flexible
 - others may not be
- Check what other people did
 - Ask colleagues, friends, mentors

How to Structure & Organize Your Paper
by Odegaard Writing & Research Center

<https://depts.washington.edu/owrc/Handouts/How%20to%20Structure%20and%20Organize%20Your%20Paper.pdf>

Guidelines for Project Proposals
by Someone?

http://writing.engr.psu.edu/workbooks/proposal_guidelines.pdf

Conclusion

- Not only a summary!
 - The summary is important, but not everything!
- Re-frame your topic in context
 - What was your contribution?
 - How are things better now?
- End with a strong statement
 - Give the reader something to think about.
 - And remember you!

Other odds and ends

Grammar, spelling, punctuation

- Boring!!!
 - But check *How to Write a Paper* by Mike Ashby
 - It has some interesting advice
 - And suggestions about not boring readings!

Figures and tables

- Always label and caption your figures and tables
- Introduce them in text

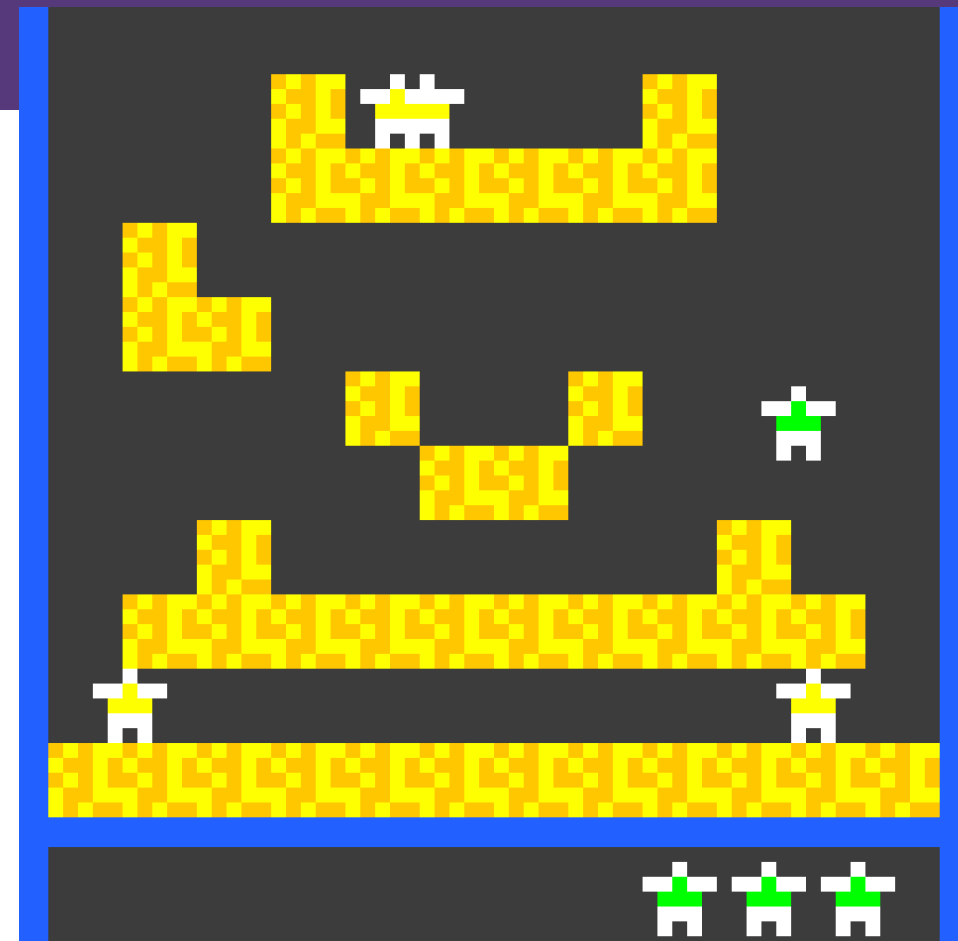

Figure 1. Frame of the second CS 447 project.

... as depicted in **Figure 1**. The project consists of a video game loooosely based on Bubble Bobble. It will be programmed in MIPS assembly.

Define everything!

- “TDMA is a well known technique...”
 - Sure, except I have no idea what you are talking about!
- Define all acronyms, abbreviations, units, symbols, etc.
 - Just because you know it, someone may not
 - E.g. “Time Division with Multiple Access (TDMA) is a well known technique...”
 - Then you can use TDMA :D
- And **please** use common terminology
